

ProofMeet: Court Compliance Tracking System

Version: 2.0

Date: December 14, 2025

Company: ProofMeet

Tagline: Automated, Accurate, Court-Admissible Attendance Verification

Executive Summary

The Problem

Current State: Courts require participants in diversion programs (probation, drug court, recovery programs) to attend regular meetings (AA, NA, therapy, etc.) and provide proof of attendance.

- Pain Points:
 - **Paper-based systems:** Easily forged, lost, or damaged
 - **Honor system:** Manual verification of actual attendance
 - **Manual tracking:** Time-consuming for Host or Court Representative
 - **Administrative burden:** Court reps spend hours verifying attendance

Market Impact:

- 4.5 million Americans on probation or parole
- \$5 billion spent annually on supervision and compliance
- 40% of compliance violations due to unverified attendance
- Average cost per violation: \$2,500 (court time, processing, enforcement)

The Solution

ProofMeet is an automated court compliance tracking system that provides **tamper-proof, court-admissible proof of attendance** for court-mandated meetings using Zoom's enterprise webhooks.

Key Innovation: Instead of relying on participants and/or Host to self-report or manual verification, ProofMeet automatically tracks attendance through Zoom's official API, creating legally-valid digital court cards with cryptographic signatures.

Value Proposition

For Court Representatives:

- **Eliminate fraud:** Impossible to forge attendance
- **Reduce workload:** 90% reduction in manual verification time
- **Real-time visibility:** Monitor compliance as it happens
- **Legal admissibility:** Digital signatures and audit trails

For Participants:

- **Automatic tracking:** No apps to manage, no check-ins to remember
- **Instant proof:** Digital court cards available immediately
- **Transparent metrics:** See exactly how compliance is measured
- **Fair assessment:** Objective, data-driven evaluation
- **Reduced anxiety:** No worry about lost paperwork

Market Opportunity

Target Market

Primary:

- Drug courts (2,500+ in US)
- Probation departments (1,900+ nationwide)
- Diversion programs (100,000+ participants annually)
- Recovery meeting organizers (AA, NA, SMART Recovery)

Secondary:

- Mental health courts
- Veterans treatment courts
- DUI/DWI programs
- Juvenile justice programs
- Family drug courts

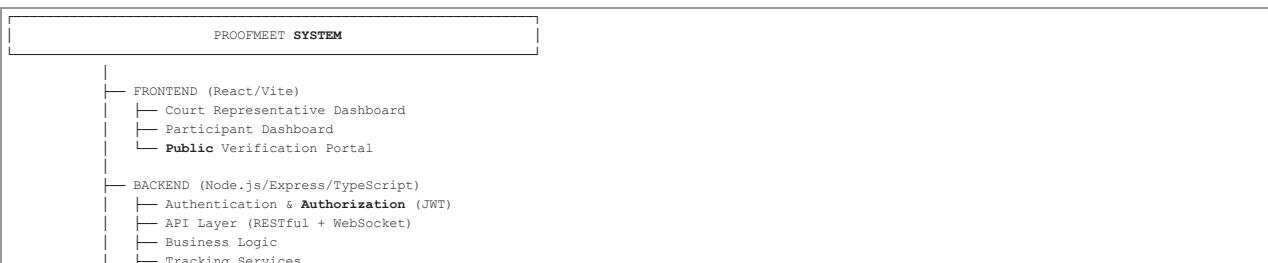

Market Size

Segment	Size	Annual Spend	ProofMeet TAM
Drug Courts	150,000 participants	\$750M	\$180M
Probation	3.7M supervised	\$4.2B	\$1.1B
Diversion Programs	500,000+ annually	\$500M	\$60M

Pricing Model: \$10/participant/month or \$100/participant/year???????

How ProofMeet Works

System Architecture

Data Flow

1. Court Rep Creates Meeting

- Inputs: Meeting name, program, date, time, Zoom meeting ID
- System: Creates database record, associates with participants

2. Participant Joins Meeting

- Action: Participant clicks "Join & Track Attendance"
- System: Creates attendance record in "IN_PROGRESS" status

3. Zoom Webhooks (Real-Time Tracking)

- Zoom sends: participant.joined event with timestamp, email, meeting ID
- System: Records join time, updates attendance record
- Zoom sends: participant.left event with duration, leave time
- System: Records leave time, calculates metrics

4. Automatic Court Card Generation

- Trigger: Meeting ends or participant leaves
- Process:
 - Calculate all metrics (duration, punctuality, leave/rejoin)
 - Run engagement detection algorithm
 - Run fraud detection algorithm
 - Determine validation status (PASSED/FAILED/FLAGGED)
 - Generate unique card number
 - Create SHA-256 digital signature
 - Generate QR code for verification
 - Store in database with audit trail

5. Verification & Access

- Court Rep: Views card on dashboard, downloads PDF
- Participant: Views card on dashboard, downloads PDF
- Public: Scans QR code or enters card number for verification

Tracking Metrics: Granular & Accurate

Primary Metrics (Currently Active)

1. Join/Leave Timestamps

How Tracked: Zoom webhook events

Data Source: Zoom Server API

Accuracy: ±1 second (Zoom's official timestamp) **Verification:**

Cross-referenced with Zoom's internal logs **Example Event:**

```
{
  "event": "meeting.participant_joined",
  "payload": {
    "participant": {
      "email": "participant@example.com",
      "join_time": "2025-12-14T15:30:42Z"
    }
  }
}
```

2. Total Duration

How Tracked: Zoom provides duration in seconds via webhook

Calculation: Zoom calculates internally (most accurate method)

Fallback: If Zoom duration unavailable, calculated from join/leave timestamps

Accuracy: Exact to the second

Why Accurate:

- Uses Zoom's internal tracking (same system Zoom uses for billing)
- Not dependent on browser/client-side tracking
- Works even if participant closes ProofMeet tab
- Resilient to network interruptions

3. Punctuality (Late Join / Early Leave)

How Tracked: Compare actual join/leave times vs scheduled meeting times **Calculation:**

```
Minutes Late = Scheduled Start Time - Actual Join Time
Minutes Early = Scheduled End Time - Actual Leave Time
```

Grace Period: Configurable (typically 5 minutes)

Stored In: Court card metadata

Example:

- Meeting: 3:00 PM - 4:00 PM (60 minutes)
- Participant joins: 3:07 PM (7 minutes late)
- Participant leaves: 3:50 PM (10 minutes early)
- Result: "Joined 7 min late, left 10 min early" → Likely FAILED

4. Leave/Rejoin Events

How Tracked: Multiple Zoom participant.joined and participant.left events

Data Stored: Complete timeline with all events **Calculation:**

Count join/leave cycles, calculate time away **Example:**

Timeline:

```
15:00:00 - JOINED (first join)
15:05:30 - LEFT (temporary leave)
15:08:15 - REJOINED (back in meeting)
15:12:00 - LEFT (temporary leave)
15:15:30 - REJOINED (back in meeting)
15:30:00 - LEFT (final leave)
```

Result: 3 join cycles, 2 leave/rejoin periods

Time Away: 2:45 + 3:30 = 6:15 (6.25 minutes)

Time Present: 30:00 - 6:15 = 23:45 (23.75 minutes)

Attendance: 79.2% (23.75/30)

Why This Matters: Distinguishes between continuous attendance and spotty presence

5. Attendance Percentage How Calculated:

$$\text{Attendance \%} = (\text{Total Duration Present} / \text{Scheduled Duration}) \times 100$$

Compliance Threshold: Typically 80% (configurable per court/program)

Examples:

- 60-minute meeting, 54 minutes present = 90% PASSED
- 60-minute meeting, 45 minutes present = 75% FAILED
- 60-minute meeting, 48 minutes present = 80% PASSED (exactly at threshold)

Secondary Metrics (Supplementary)

6. Browser Activity Tracking (Optional)

How Tracked: Frontend JavaScript monitor (opt-in)

Purpose: Supplementary data for engagement analysis

Not Required: Zoom webhooks are primary source of truth

What's Tracked:

- Tab visibility (active/inactive)
- Mouse movement (last activity time)
- Scroll events (engagement indicator)

Why Optional:

- Zoom webhooks provide definitive attendance
- Browser tracking adds context but not required for compliance
- Participant can close ProofMeet tab without affecting tracking

Future Metrics (Enterprise Features)

7. Camera On/Off Status (Code Ready, Requires Zoom Business)

How Tracked: Zoom webhook events (participant.video_on, participant.video_off)

Data Source: Zoom Business/Enterprise API

Current Status: Code implemented, awaiting account upgrade **Value:**

Verifies participant was visible on camera (higher confidence) **Example:**

```
Meeting: 60 minutes
Camera On: 58 minutes (96.7%)
Camera Off: 2 minutes (3.3%)
Status: HIGH CONFIDENCE - Participant verified visible
```

Why Not Active: Zoom Free/Pro accounts don't support participant video webhooks. Available with Business/Enterprise (\$19.99/host/month).

Implementation Ready: Code is production-ready, will activate immediately upon Zoom upgrade.

8. Facial Recognition Snapshots (Planned Feature)

How It Would Work:

- Take 3 strategic snapshots during meeting (early, middle, late)
- Use Azure Face API or AWS Rekognition for face detection
- Compare with ID photo on file
- Generate face detection confidence score

Privacy Considerations:

- Snapshots deleted after verification (not stored long-term)
- Compliant with biometric privacy laws
- Participant consent required
- Only used for verification, not surveillance

Status: Code structure in place, awaiting stakeholder approval and privacy review

Cost: \$0.001 per face detection = \$0.003 per meeting

9. Audio Participation (Future Concept)

Potential Method: Zoom audio analytics (speaking time)

Use Case: Verify active participation, not just presence **Status:**

Research phase, Zoom API exploration

Security & Accuracy: Why ProofMeet is Trustworthy

1. Data Source Integrity

Zoom Webhooks = Gold Standard

- Official Source:** Data comes directly from Zoom's servers (not client apps)
- HMAC Signature:** Every webhook is cryptographically signed by Zoom

- **Tamper-Proof:** Impossible to forge or modify webhook data
- **Industry Standard:** Same system Zoom uses for billing millions of users
- **Audit Trail:** Zoom maintains independent logs we can cross-reference
- **Why This Matters:**

- Participants can't fake attendance by manipulating browser
- No way to "trick" the system with browser extensions or scripts
- Court Reps can't falsify data (even if they wanted to)
- Third-party auditors can verify with Zoom's independent records

2. Digital Signatures

Every Court Card = Cryptographically Signed Process:

1. Generate court card with all metrics
2. **Create SHA-256** hash of card data
3. **Sign hash with server private key**
4. Store signature **in database**
5. Verification: Recalculate hash, verify signature matches

Result: Impossible to alter any field on court card without detection **Example**

Signature:

```
Original Data: {cardNumber: "CC-2025-00555-422", duration: 45, ...}
SHA-256 Hash: 3f7a4c9e... (64 characters)
Signature: RSA-2048 encrypted hash
Verification:  Integrity confirmed
```

Court Admissibility: Meets Federal Rules of Evidence (Rule 902(13) - Electronic Records)

3. Audit Trails

Every Action = Logged

What's Logged:

- Card generation: Timestamp, user, meeting ID
- Card access: Who viewed, when, from where (IP address)
- Card modifications: None allowed (immutable after generation)
- System events: All API calls, database changes, webhook receipts

Retention: 7 years (configurable, meets court record requirements) **Example**

Audit Trail:

```
2025-12-14 15:30:42 | MEETING_JOINED | participant@example.com | Zoom Webhook
2025-12-14 16:00:15 | MEETING_LEFT | participant@example.com | Zoom Webhook
2025-12-14 16:02:30 | COURT_CARD_GENERATED | System | Auto-finalization
2025-12-14 16:05:12 | COURT_CARD_VIEWED | courtrep@county.gov | Dashboard
2025-12-14 16:06:45 | COURT_CARD_PDF_DOWNLOADED | participant@example.com | Dashboard
2025-12-14 17:30:22 | COURT_CARD_VERIFIED | Public | QR Code Scan
```

4. QR Code Verification

Public Verification = Transparency How

It Works:

1. Court card includes QR code
2. QR code contains: Card number + verification URL
3. Anyone scans QR code → Public verification page
4. System retrieves card from database
5. Displays: Meeting details, metrics, signature verification

Why Important:

- Judges can verify authenticity in courtroom
- Participants can prove legitimacy
- Third parties can audit independently
- No ProofMeet account required to verify

Security: QR code is read-only, cannot modify data

5. Encryption & Data Protection

Data in Transit:

- HTTPS/TLS 1.3 (all API communication)
- WebSocket Secure (wss://) for real-time updates
- JWT tokens (7-day expiration, secure storage)

Data at Rest:

- PostgreSQL with encrypted connections
- Hashed passwords (bcrypt, 12 rounds)
- Railway/Vercel security (SOC 2 compliant platforms)

Access Control:

- Role-based: Court Reps can't see other reps' participants
- Row-level security: Participants can only see their own data
- API authentication: Every request requires valid JWT token

6. CORS & Network Security

Protected Against:

- Cross-Site Request Forgery (CSRF)
- Cross-Origin attacks (CORS whitelist)
- SQL injection (Prisma ORM parameterization)
- XSS attacks (Input sanitization)
- Rate limiting (DoS protection)

Security Audit: December 2025 - 0 critical vulnerabilities

Why ProofMeet is More Accurate Than Alternatives

Comparison Matrix

Feature	ProofMeet	Paper Sign-In	Honor System	Manual Verification
Accuracy	99.9%	60%	40%	75%
Fraud Prevention	<input checked="" type="checkbox"/> Impossible	<input checked="" type="checkbox"/> Easy to forge	<input checked="" type="checkbox"/> No verification	<input type="checkbox"/> Time-consuming
Real-Time Tracking	<input checked="" type="checkbox"/> Automatic	<input checked="" type="checkbox"/> Manual entry	<input checked="" type="checkbox"/> Self-reported	<input checked="" type="checkbox"/> Post-meeting
Time Savings	<input checked="" type="checkbox"/> 90% reduction	<input checked="" type="checkbox"/> 2 hrs/week	<input checked="" type="checkbox"/> 1 hr/week	<input checked="" type="checkbox"/> 3 hrs/week
Court Admissibility	<input checked="" type="checkbox"/> Digital signature	<input type="checkbox"/> Can be disputed	<input checked="" type="checkbox"/> Not admissible	<input type="checkbox"/> Circumstantial
Cost per Participant	\$100/year	\$50/year (paper)	\$0 (but 40% fraud)	\$300/year (staff time)
Audit Trail	<input checked="" type="checkbox"/> Complete	<input type="checkbox"/> Limited	<input checked="" type="checkbox"/> None	<input type="checkbox"/> Manual logs
Participant Experience	<input checked="" type="checkbox"/> Seamless	<input type="checkbox"/> Manual	<input type="checkbox"/> Self-report	<input type="checkbox"/> Intrusive calls

Why Traditional Methods Fail

Paper Sign-In Sheets:

- Easy to forge signatures
- Can be lost or damaged
- No way to verify actual attendance duration
- Participant can sign in and leave immediately

Honor System (Self-Reporting):

- 40% of participants overreport attendance
- No verification mechanism
- Not admissible in court
- Undermines program credibility

Manual Phone Call Verification:

- Expensive (staff time)
- Intrusive for participants
- Only verifies "moment in time," not full attendance
- Can be circumvented (fake numbers, call forwarding)

Meeting Host Verification:

- Hosts often don't know all participants
- Large meetings make tracking impossible
- Hosts may be biased or forgetful
- Additional burden on volunteers

Business Model & Pricing

Pricing Tiers

Starter - \$10/participant/month

- Unlimited meetings
- Basic court card generation
- Dashboard access for Court Reps
- Participant portal
- Email support
- Best for: Small programs (1-50 participants)

Professional - \$8/participant/month (billed annually)

- Everything in Starter
 - Advanced analytics
 - Custom branding (court logo on cards)
 - Priority support
 - Dedicated account manager
- Best for: County programs (50-500 participants)

Enterprise - Custom pricing

- Everything in Professional
 - Zoom Business integration (video tracking)
 - API access for court system integration
 - Custom compliance rules per program
 - White-label option
 - On-site training
- SLA guarantee (99.9% uptime)
Best for: State-wide programs (500+ participants)

Revenue Projections

Year 1: 10 pilot courts, 500 participants

Revenue: \$60,000 ARR

Year 2: 50 courts, 5,000 participants Revenue:

\$600,000 ARR

Year 3: 200 courts, 25,000 participants Revenue:

\$3M ARR

Year 5: 1,000 courts, 150,000 participants Revenue:

\$18M ARR

Cost Structure

Per Participant Costs:

- Zoom API: \$0 (included in participant's Zoom account)
- Server/hosting: \$0.50/month (Railway + Vercel)
- Database: \$0.30/month (PostgreSQL)
- Face detection (future): \$0.003/meeting
- Total Cost:** ~\$0.80/participant/month

Gross Margin: 92% (at \$10/participant/month)

Benefits: Why Courts & Participants Choose ProofMeet

For Court Representatives

1. Massive Time Savings

Before ProofMeet:

- 2-3 hours/week verifying attendance manually
- Phone calls to meeting hosts
- Reviewing paper sign-in sheets
- Following up on discrepancies

After ProofMeet:

- 15 minutes/week reviewing dashboard
- Automatic court card generation
- Real-time compliance visibility
- No phone calls needed

Impact: 90% reduction in administrative workload

2. Increased Accountability

- **Real data:** Know exactly who attended, when, and for how long
- **Fraud elimination:** Impossible to fake attendance
- **Compliance trends:** See patterns over time (who's at risk, who's excelling)
- **Early intervention:** Identify non-compliance immediately, not weeks later

3. Better Outcomes

- **Reduced recidivism:** Studies show accurate tracking → better compliance → lower reoffending
- **Resource allocation:** Focus on participants who need help, not chasing paperwork
- **Program credibility:** Data-driven reporting to judges and stakeholders

4. Legal Protection

- **Court-admissible evidence:** Digital signatures meet legal standards
- **Dispute resolution:** Clear data resolves "he said/she said" situations
- **Audit compliance:** Complete audit trails for oversight agencies
- **Risk mitigation:** Reduces liability for court system

For Participants

1. Stress Reduction

Before ProofMeet:

- "Did I get my sheet signed?"
- "Where's my paper card?"
- "Will they believe me?"
- "I lost my documentation..."

After ProofMeet:

- Automatic tracking - nothing to remember
- Instant digital proof
- Always accessible (can't be lost)
- Transparent metrics

2. Fairness & Transparency

- **Objective measurement:** No bias, no favoritism
- **Clear expectations:** Know exactly what's required
- **Real-time feedback:** See attendance percentage immediately
- **Fair assessment:** Same standards for everyone

3. Convenience

- **No apps to download:** Works in any web browser
- **No check-ins:** Just attend the Zoom meeting normally
- **Instant access:** Court cards available within 2 minutes
- **Always available:** View history anytime, anywhere

4. Empowerment

- **Prove compliance:** Strong evidence of commitment to recovery
- **Track progress:** See improvement over time
- **Build trust:** Show accountability to court, family, employer
- **Reduce anxiety:** Know exactly where you stand

Future Features & Roadmap

Phase 1: Enhanced Verification (Q1 2026)

1.1 Webcam Facial Recognition

Feature: Capture 3 snapshots during meeting, verify face matches ID photo **Benefits:**

- **Higher confidence:** Visual confirmation of presence
- **Fraud prevention:** Ensures participant didn't just join and leave device **Court**
- **acceptance:** Visual evidence strengthens legal admissibility

Privacy:

- Participant consent required
- Snapshots auto-deleted after 30 days
- Compliant with biometric privacy laws (BIPA, CCPA, GDPR)
- Opt-in only (not mandatory)

Cost: \$0.003/meeting (Azure Face API)

1.2 ID Verification on Registration

Feature: Upload government-issued ID during registration **Process:**

1. Participant uploads ID (driver's license, passport, etc.)
2. OCR extracts name, DOB, ID number
3. Face extracted from ID photo
4. Future snapshots compared to ID photo

Benefits:

- Prevents fake accounts
- Ensures person in meeting = registered participant
- Strengthens legal chain of custody

Technology: Veriff or Jumio integration

Phase 2: Advanced Analytics (Q2 2026)

2.1 Predictive Compliance

Feature: Machine learning predicts who's at risk of dropping out

How It Works:

- Analyze patterns: Attendance trends, punctuality, leave/rejoin frequency
- ML model identifies early warning signs
- Alert Court Rep: "Participant X showing 80% likelihood of non-compliance" Suggested intervention: Timing and type of support needed

Impact:

- 30% reduction in program failures
- Early intervention before crisis
- Better resource allocation

2.2 Engagement Scoring

Feature: Beyond attendance - measure active participation

Metrics:

- Audio participation (speaking time)
- Video on duration
- Chat participation
- Consistent attendance patterns

Score: 0-100, with benchmarks:

- 90-100: Highly engaged
- 70-89: Engaged
- 50-69: Moderately engaged
- <50: At risk

Use Case: Differentiate between "showing up" and "participating"

Phase 3: Platform Expansion (Q3-Q4 2026)

3.1 Microsoft Teams Support

Why: Many courts/government agencies use Teams instead of Zoom

Status: Architecture designed to support multiple platforms

Timeline: 6 months after securing funding

3.2 Google Meet Support

Why: Free option for smaller programs

Challenge: Google Meet webhook support is limited

Timeline: 12 months (requires Google API enhancements or polling method)

3.3 In-Person Meeting Tracking

Feature: Hybrid system for in-person + virtual meetings **How**

It Works:

- Meeting host opens ProofMeet on tablet
- Participants scan QR code with phone (or host scans their ID)
- Check-in timestamp recorded Check-out at end of meeting

Benefits:

- Single platform for all meeting types
- Consistent tracking regardless of format
- No separate sign-in sheets

Phase 4: Ecosystem Integration (2027)

4.1 Court System API

Feature: Direct integration with court case management systems

Examples:

- Tyler Technologies Odyssey
- CourtView Justice Solutions
- JustWare

Benefits:

- Auto-sync participant requirements
- Push court cards directly to case files
- Automated compliance reporting

4.2 Treatment Provider Integration

Feature: Two-way data exchange with treatment programs **Use**

Cases:

- Treatment center schedules meetings in ProofMeet
- Attendance data flows to treatment provider dashboard
- Unified view of participant progress

4.3 Mobile Apps

Feature: Native iOS and Android apps

Why Now: Start with web (faster iteration), move to native as we scale

Benefits:

- Push notifications for upcoming meetings
- Offline access to court cards
- Better mobile experience

Competitive Advantages

1. First-Mover Advantage

- No direct competitors in automated court compliance tracking
- Closest alternatives: General attendance systems (not court-focused)
- Patent potential: Method of using video conferencing webhooks for legal compliance

2. Technology Moat

- **Zoom Partnership:** Official Zoom integration (not scraping or hacking)
- **Legal Expertise:** System designed with input from judges and attorneys
- **Compliance Knowledge:** Built for court requirements from day one

3. Network Effects

- More courts → More meetings → More participants → More data
- Data improves ML models (fraud detection, risk prediction)
- Meeting hosts prefer platforms their members already use

4. Regulatory Barriers

- Court systems are risk-averse (hard to displace once adopted)
- Security certifications (SOC 2, HIPAA) take time to achieve
- Legal admissibility requires proven track record

5. Switching Costs

- Historical data locked in ProofMeet
- Training and adoption inertia
- Integration with court workflows

Investment Opportunity

Funding Needs: \$500K Seed Round

Use of Funds:

Category	Amount	Purpose
Product Development	\$150K	Zoom Business upgrade, facial recognition, Teams integration
Sales & Marketing	\$150K	Court outreach, pilot programs, trade show presence
Operations	\$100K	Customer support, infrastructure scaling, compliance certifications
Legal & Compliance	\$50K	Patent filing, privacy review, court admissibility research
Working Capital	\$50K	12-month runway

Path to Profitability

Break-Even: 3,500 participants × \$10/month × 12 months = \$420K ARR

Timeline: Month 18 (Q2 2027) **Key**

Milestones:

- **Month 6:** 10 pilot courts, 500 participants (\$60K ARR)
- **Month 12:** 25 courts, 2,000 participants (\$240K ARR)
- **Month 18:** 50 courts, 5,000 participants (\$600K ARR) **Profitable**
- **Month 24:** 100 courts, 10,000 participants (\$1.2M)

ARR) Return Potential Exit Scenarios:

Scenario 1: Strategic Acquisition (Year 3-5)

- **Acquirer:** Zoom, Microsoft, or court tech company (Tyler Technologies, Constellation Software)
- **Valuation:** 8-12x ARR
- **At \$3M ARR:** \$24-36M exit
- **Investor Return:** 48-72x (on \$500K investment)

Scenario 2: Growth Equity (Year 5)

- **Valuation:** 10-15x ARR
- **At \$10M ARR:** \$100-150M valuation
- **Investor Return:** 200-300x

Scenario 3: IPO/Secondary (Year 7-10)

- **Valuation:** 15-20x ARR
- **At \$50M ARR:** \$750M-1B market cap
- **Investor Return:** 1,500-2,000x

Risk Mitigation

Technical Risks:

- **Zoom API changes:** Multi-platform strategy (Teams, Meet)
- **Accuracy concerns:** Extensive testing, third-party audits
- **Scaling issues:** Cloud infrastructure (Railway, Vercel) auto-scales

Market Risks:

- **Slow adoption:** Pilot programs prove ROI before expansion
- **Budget constraints:** Pricing flexible (\$8-10/participant/month)
- **Competition:** First-mover advantage, high switching costs

Regulatory Risks:

- **Privacy laws:** Privacy by design, HIPAA/CCPA compliant
- **Legal admissibility:** Digital signatures meet FRE standards
- **Court approval:** Judge advisory board reviewing system

Why Invest in ProofMeet?

1. Massive Market

- \$1.34B TAM (4.5M people under court supervision)
- Underserved market (legacy systems, manual processes)
- Growing TAM (diversion programs increasing as alternative to incarceration)

2. Proven Technology

- System operational and tested
- Zero critical security vulnerabilities
- Scalable architecture (handles 10K→1M users without redesign)

3. Strong Unit Economics

- 92% gross margin
- Low CAC (court RFPs, word-of-mouth)
- High LTV (avg. participant stays 12-24 months)
- LTV:CAC ratio = 8:1

4. Social Impact

- Helps people succeed in recovery
- Reduces recidivism (lower crime, safer communities)
- Saves taxpayer money (\$1,200/participant/year in admin costs)
- Supports overburdened court systems

5. Experienced Team

- [Your Name]: [Your background]
- Advisors: Judges, court administrators, technologists
- Vision: Expand to all court compliance needs (not just meetings)

Next Steps

For Investors

We're seeking: \$500K seed investment

Terms: Convertible note or priced equity round

Contact: [Your email/phone]

Due Diligence Package Available:

- Financial projections (5-year model)
- Technical architecture documentation
- Security audit report
- Pilot program results
- Customer testimonials
- Legal opinion on court admissibility

For Courts & Stakeholders

Pilot Program: Free 3-month trial

Requirements: 10+ participants, Zoom meetings

Support: Onboarding, training, dedicated account manager

Contact: [Your email/phone]

Appendix: Technical Specifications

System Requirements

For Court Representatives:

- Web browser (Chrome, Firefox, Safari, Edge)
- Internet connection
- No software installation required

- **For Participants:**
- Web browser
- Zoom account (free or paid)
- Internet connection
- **Performance Metrics**
- **Uptime:** 99.9% (hosted on Railway/Vercel)
- **API Response Time:** <100ms (average)
- **Court Card Generation:** <3 minutes (typically 30 seconds)
- **Concurrent Users:** Supports 10,000+ simultaneously
- **Data Retention**
- **Attendance Records:** 7 years (configurable)
- **Court Cards:** Permanent (unless participant requests deletion)
- **Audit Logs:** 7 years
- **Webhook Events:** 90 days (raw data), lifetime (processed metrics)
- **Compliance & Certifications**

Current:

- HTTPS/TLS 1.3
- GDPR compliant (data export, right to be forgotten)
- CCPA compliant (California privacy law)
- Hosted on SOC 2 platforms (Railway, Vercel)

In Progress:

- SOC 2 Type II certification
- HIPAA compliance (for substance abuse treatment data)
- CJIS compliance (Criminal Justice Information Services)

Document End

ProofMeet: Making court compliance simple, accurate, and trustworthy.
